This standard contains the following contents: foreword, scope, normative references, definitions, general requirements, structure, marking, tests, low voltage AC electric machines for rated voltage up to and including 1000V (including AC/DC motors), high voltage AC electric machines for rated voltage above 1000V, DC electric machines, portable and spare generators, frequency variation electric machines. It establishes the safety requirements for structure, electricity, mechanics, packaging and marking of small and medium size rotating electrical machines for general purpose, as well as the relevant testing methods.
G/TBT/N/CHN/203	02/05/06	China - Alternating-current metal-enclosed switchgear and control gear National Standard of the P.R.C., Alternating-current Metal-enclosed Switchgear and Control gear for Rated Voltages Above 3.6 kV and up to and Including 40.5 kV. This standard is modified in relation to IEC 62271-200:2003. It specifies the technical requirements for factory-assembled metal-enclosed switchgear and control gear of which the alternating current of rated voltages are above 3.6 kV and up to and including 40.5 kV, indoor and outdoor installed, and the service frequencies are up to and including 50Hz. The enclosures may include fixed or removable components, and may be filled with fluid (liquid or gas) for insulation. This standard is applied to the metal-enclosed switchgear and control gear containing gas-filled compartments, of which the limitation of design pressure is not more than 300 kPa (relative pressure). Note 1: Although primarily dedicated to three-phase systems, this standard can also be applied to single-phase or two-phase systems. Note 2: The safety of equipment depends on the design, usage, adjustment, coordination, installations and operations of the products.
