ISR/803	14/05/2014	13/07/2014	Gate valves	<p>Israel - Gate valves (<a href="#">in Hebrew</a>) Revision of the partially Mandatory Standard SI 222 to be replaced with SI 12288. Industrial valves - Copper alloy gate valves This draft standard revision adopts the European Standard EN 12288: May 2010 and therefore is significantly different from the old version. The major difference between them is the expansion of the standard's scope to apply to copper alloy gate valves for general use having flanged, threaded, capillary, compression or loose nut/union body ends, with nominal diameters that range from 8 mm to 110 mm or with nominal sizes that range from DN 8 to DN 500 and that are designed to work under pressure that ranges from 6 to 63 bar. Both the old standard and the new revised standard will apply for 1 year from date of entry into force. During this time copper alloy gate valves may be tested either according to the old or the revised standard.</p>
