Food and Drug Regulations — Amendment
Interim Marketing Authorization
Provision currently exists in Table V to section B.16.100 of the *Food and Drug Regulations* for the use of the enzyme lipase derived from various micro-organisms in the production of different food products, including the hydrolysis of animal and vegetable proteins. The permitted sources of the lipase enzyme include the micro-organisms *Aspergillus niger*, *Aspergillus oryzae*, *Mucor miehei*, *Penicillium camembertii*, *Rhizopus niveus* and *Rhizopus oryzae*.
Health Canada has received a submission to permit the use of a phospholipase enzyme obtained from a conventional strain of *Streptomyces violaceoruber*. Phospholipase enzymes are classified under the broad class of lipase enzymes. This phospholipase enzyme would be used for the hydrolysis of phospholipids, such as lecithin, at levels consistent with good manufacturing practice.
