France – Labelling of radio equipment

China expressed concern with a new regulation that requires the display of the standard absorption rate (SAR) of radio terminal equipment in France. While China respected the objective of protecting human health and safety, it urged France to remove the requirement as it could lead to consumer confusion and added unnecessary costs. France was requested to postpone the implementation of the requirement for 12 months to allow industry to adapt.

The EU said that the regulation was a response to requests from consumer organizations regarding public exposure to radio equipment. The entry into force was set for July 2020.
